INB370/INN370 Assignment 1 Submission Procedure

This document outlines the steps you need to follow to submit INB370/INN370 Assignment 1. Please note that a number of automated tools will be used to assist with the marking of this assignment. To this end, please follow these instructions carefully so that your files are in the appropriate directories (folders) to be detected by our tools. In particular, check that you have spelled the names of your Java packages and classes correctly.

Exporting Your Eclipse Project

Your entire submission will be contained in a single zip archive exported from within Eclipse. Make sure that your solution to the assignment is in a Java package named `asgn1Solution` in the same Eclipse project as the provided package `asgn1Question`.

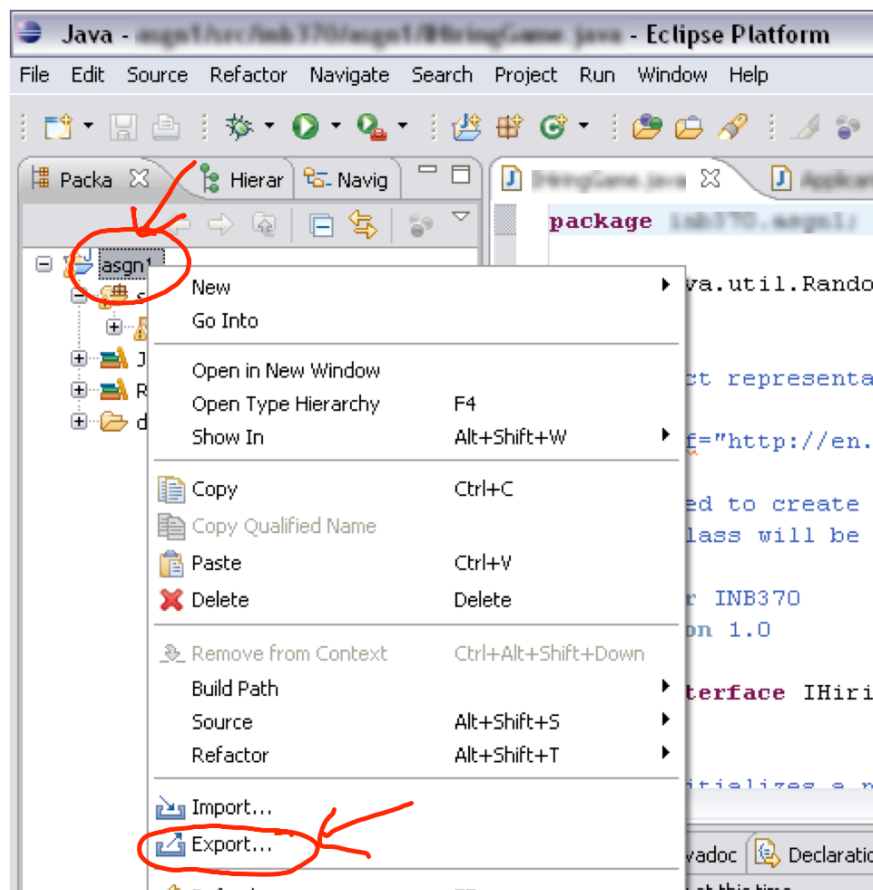

Figure 1 – Right-click on the project folder as shown and choose the `Export…` menu entry.

Once you are ready to submit, open the Eclipse workspace containing your assignment. Right-click on the project folder as shown in Figure 1 above and select the `Export…` entry in the pop-up menu. **It is important that you select the *project* folder, as shown in the figure, otherwise not all of your files will be included in the zip archive.**

Once you have done this an Export Wizard dialogue box like that shown in Figure 2 will open. Select the `Archive File` option under the `General` heading.
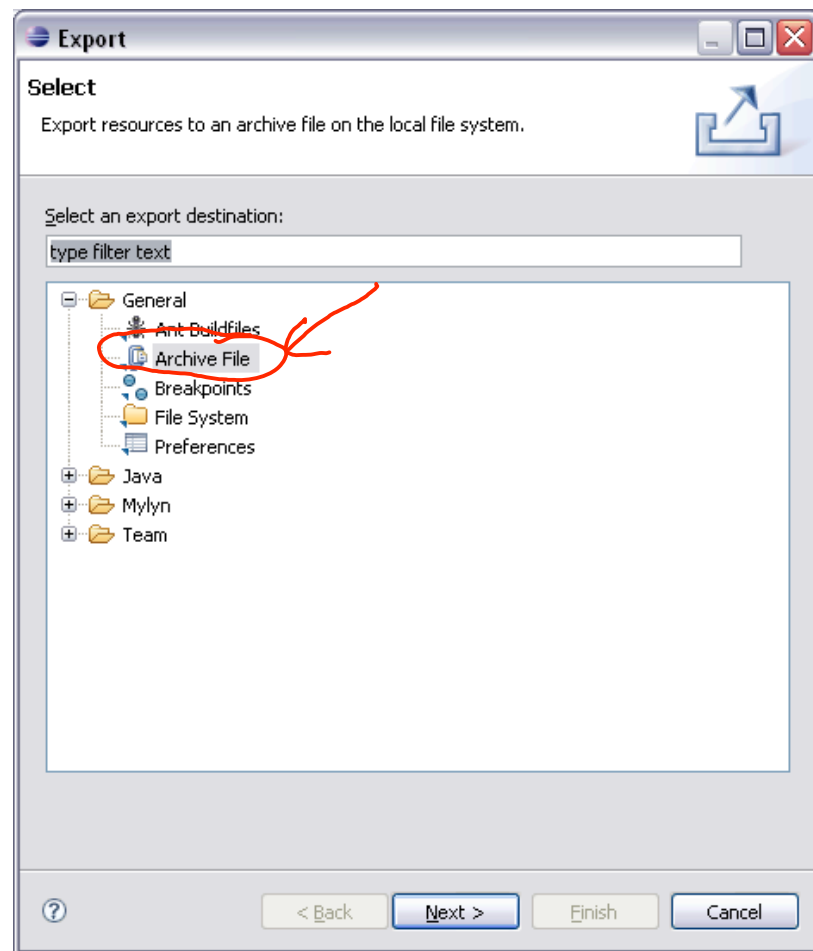

The next step of the wizard is shown in Figure 3. In the top left list of projects ensure that there is a check mark next to the name of the project containing your assignment. Do not include any other project (your assignment submission must be contained in a single project). Press the `Browse…` button next to the '`To archive file:`' text box. Browse to an appropriate folder in which to save the archive and enter the file name as "`asgn1.zip`" (without the quotes). Press the `Save` button.

Make sure in the `Options` list that the radio button next to '`Save in zip format`' is selected as are the '`Create directory structure for files`' and '`Compress the contents of the file`' options. Once this is done, press `Finish`.
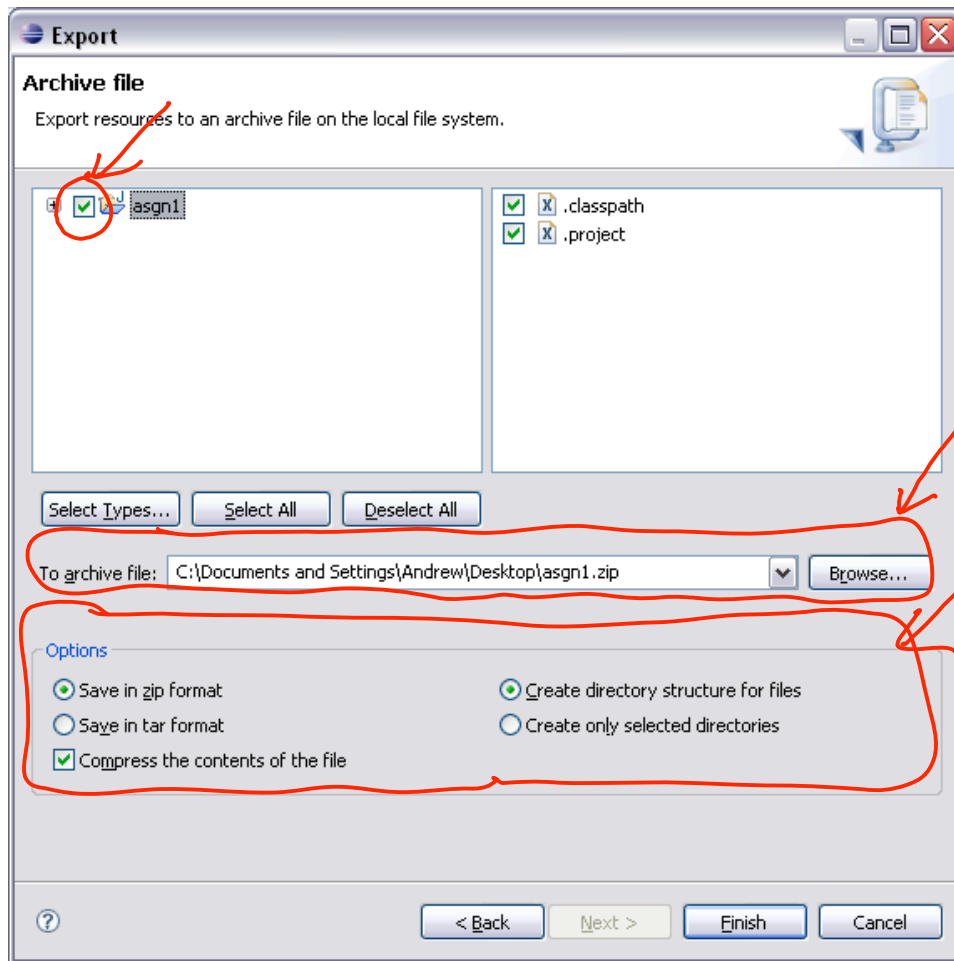

Figure 3 – The final step of the Export Wizard. Ensure that the project containing your assignment has a check next to it and that the `Options` area is configured as shown. Press `Browse…` to select the save location; your zip file must be named `asgn1.zip`. Once you are ready select `Finish` to export your work.

Note that if you make any changes to your assignment *after* performing the above steps, you need to redo them to create a new zip archive before submitting it through the Online Assessment System.

Submitting Your Eclipse Project

When you have successfully created your zip archive go to the Online Assessment System website (http://oas.scitech.qut.edu.au) and follow the submission instructions to submit the file. The OAS site has a number of instructions pages accessible via the menu on the left.
